

First insight:

From this dashboard, I clicked on Kenya

From 2000 to 2003, deaths were between 45,000 and 50,000, and the average number of deaths in Kenya was 27,896 compared to Africa as a whole, so it was the highest among deaths.

:Second insight

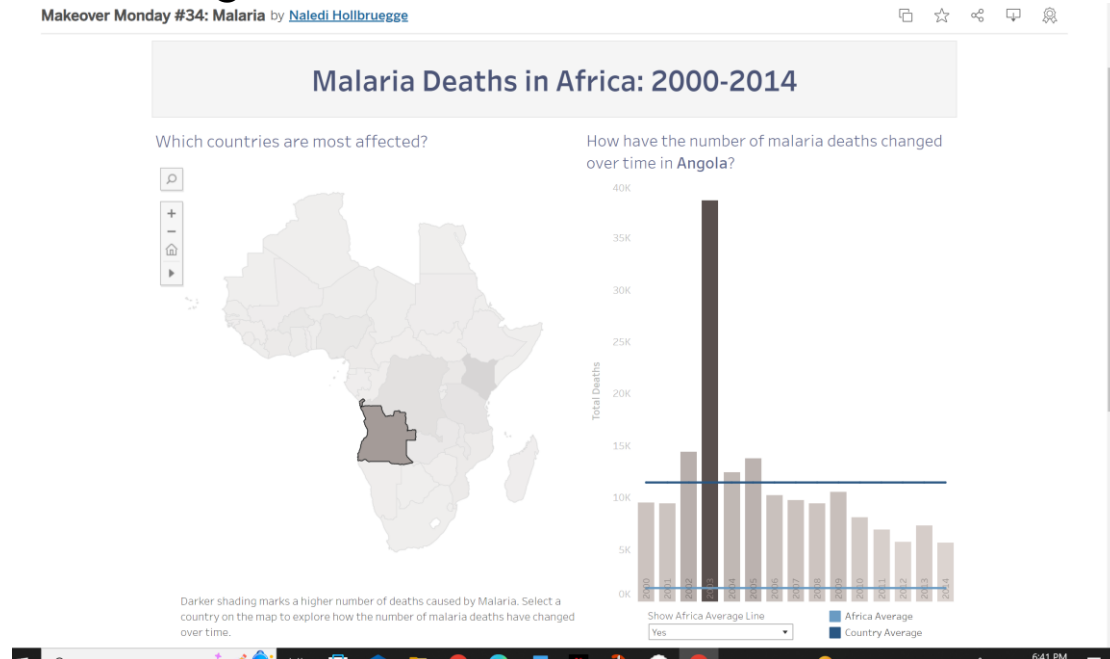

From this dashboard, I clicked on Namibia

From 2001 to 2006, the number of deaths was between 1,700 and 600 annually, and the highest number of deaths was in 2001. From 2007 to 2014, the number of deaths decreased between 200 and 10 deaths per year, and the lowest number of

deaths was in 2012. The average number of deaths was 572 in Namibia, compared to the average number of deaths in Africa 1303. It is less than the average number of deaths in the whole of Africa

:Third insight

From this dashboard, I clicked on Angola

Note that the number of deaths in 2003 was very high compared to the rest of the years from 2000 to 2014, with the exception of 2003. The number of deaths ranged from 15,000 to 5,000 annually. Unlike 2003, the number of deaths reached approximately between 35,000 and 40,000, and the average death toll in Angola reached 11,469. Compared to the average death rate in Africa, 1,303 per year, it was very high
